

Virtual Presentation

Toronto Region Conservation Authority's 2019 High Park Terrestrial Biological Inventory.

In 2017, the City of Toronto requested the Toronto & Region Conservation Authority to conduct a biological inventory of terrestrial flora and fauna within High Park. Field work was carried out throughout 2018, with a report finalized in 2019.

This virtual presentation provides an opportunity to hear about the Toronto & Region Conservation Authority's methodology, findings and observations as presented in the final High Park Terrestrial Biological Inventory report. There will be an opportunity to ask questions about the report.

Urban Forestry staff will provide a brief overview on current management activities and how the report will be used to support and guide management work in the park. This presentation is hosted by the City of Toronto – Urban Forestry. The event is free and open to the public.

Meeting details

April 20th, 2021

12:00 - 1:30

This virtual meeting will be accessible online and by phone-in. The City of Toronto is following the most current advice provided by Public Health officials as a result of COVID-19.
